

Study plan

Dear Sir/Madam:

Hello!

My name is Ghassan Mohammed Ali Al-Maitami, and my Chinese name is 谭益友. I am from Yemen. I was born in IBB, on April 5, 1999.

Since September 2018, I have been studying Computer Science and Technology in the College of Information Science and Engineering of Lanzhou University and am expected to graduate in July 2022.

Education background:

I was born in a family that loves to study and has an influential influence on Yemeni society and education. Therefore, I have been more strict with myself since I was a child. I have maintained a good grade first in the class from elementary school to high school, with a high school score of 90.13%.

Since I was a child, I have been deeply attracted by China's extensive and profound culture and long-standing history, so I am interested in learning Chinese and understanding Chinese culture, striving to become a bond that enhances the understanding and friendship between the Chinese and Yemen people, and develops the culture and education of China and Yemen. Exchanges and cooperation in other fields. In March 2016, I passed the admission test to travel to China, and during my study of the Chinese language, I won a scholarship from the president of the university to study a bachelor's degree in computer science and technology at Lanzhou University.

During my studies at Lanzhou University, I have always taken course studies seriously, studied hard, got excellent grades, and I got an excellent grade for a foreign student. Because of his excellent academic performance, he was highly recognized by the teachers. I am enthusiastic about public welfare and actively help the teachers and students around me. I have participated in a lot of various activities. I achieved the goal that I had locked before coming to China and laid a solid foundation for my future development.

In addition to my studies in Computer Science and Technology, the Chinese Proficiency Test (HSK) is the test that best reflects the true Chinese proficiency of international students. In this test, I have achieved an excellent score.

In addition to Arabic, the official language of the Arab countries, I am also proficient in Chinese and English and have basic abilities in listening, speaking, reading, writing, and translation.

Research Interests:

My main research interests are in the fields of machine learning . I'd like to make computers do more with less help from us, learn from experience, adapt effortlessly, and discover new knowledge. We need computers that reduce information overload by extracting the important patterns from masses of data.

This poses many deep and fascinating scientific problems: How can a computer decide autonomously which representation is best for target knowledge?

How can it tell genuine regularities from chance occurrences?

How can pre-existing knowledge be exploited?

How can a computer learn with limited computational resources?

How can learned results be made understandable by us?

I believe that Machine Learning, in particular, is an area with a lot of potentials. My grounding in this field is solid, and this is because of the experiences I gained through my study of courses and his readers of research related to machine learning.

Reasons to study in China:

Now the question arises, "Why China?" Reading the books, watching the news, analyzing and observing the people of China, I am impressed by how these individuals have proved themselves to be dedicated to their work, and with true efforts, they have set China as a successful example for other thirds world or developed countries.

The fast-growing economy, technological advancement, and the global ranking education institutes of China with higher makes a great aspiration to the students and professionals for the better career perspectives. Thus, such kind of positivity has boosted my confidence further, and I am highly satisfied with the decision I have taken. Moreover, China's diverse cultural norms and values, the famous gentle hospitality of its people, and Yemen-China all-weather friendly relations since past to promote bilateral trade, acceptance, and peace to both sides in great clarity make me feel China is my second homeland; also my family fully supports my choice for China being my preference for graduate studies.

All these reasons are put together to make China an ideal place for me to do my Master's degree.

Goals:

I am applying to the Dalian University of Technology, China, for admission to the M.Sc. program in Computer Science and Technology. My goal is to pursue a career in research, either in industry or in academia. Ten years from now, I envisage myself as a full-fledged research professional in an organization or a faculty member at one of the leading universities in my country.

A Master's is an important first step in achieving this objective.

My Targets after graduation:

Upon completing my Master's degree, my plan is to get a doctorate degree, postdoctoral study, and then go back to Yemen to work as a tutor in the university in the field of Artificial intelligence and Machine Learning. It is worthy of mention that the universities and the colleges in Yemen are suffering from the scarcity of academic staff in the field of Computer Science.

Being a tutor in the university will help build a younger generation that will be able to innovate and make our country in developed countries classification. In addition to my strong ambition, motive, and hardworking nature, should I be fortunate enough to be offered a chance to continue my graduate study in a suitable academic environment with expert professors and well-established facilities like China.

Concluding, with high hopes, I believe this letter will receive your favorable consideration, and I will be happy to provide any additional information you may need.

I look forward to receiving your reply.
